UNITED STATES DEPARTMENT OF AGRICULTURE BUREAU OF AGRICULTURAL ECONOMICS : WASHINGTON, D. C.

January 17, 1947

Resorve

SMALLER TURKEY CROP EXPECTED THIS YEAR

Turkey growers plan to reduce turkey production in 1947 by 16 percent the Bureau of Agricultural Economics reported today. This will be the second successive reduction since the peak production year of 1945. If growers carry out their intentions the number of turkeys raised this year will be about $34\frac{1}{2}$ million, compared with 41 million in 1946. The 1947 crop would be 23 percent smaller than the record crop of 45 million in 1945. The 1939-43 average number was about $33\frac{1}{2}$ million turkeys.

Turkey growers in the West, where about a fourth of the 1946 crop was raised, plan a decrease of 26 percent this year. A decrease of 16 percent is expected in the West North Central States, the largest producing area in the United States with 31 percent of the Nation's turkeys. In the South Atlantic States growers plan a decrease of about 12 percent. Growers in East North Central and the North Atlantic States expect a 10 percent decrease from the 1946 crop. The smallest decrease planned this year is 7 percent in the South Central States. Growers in Texas and Oklahoma plan a decrease of only 5 percent, which partially offsets much heavier decreases in other States in this area.

Numbers actually raised usually vary from January 1 intentions, the difference depending on prices of feed, hatching eggs and poults, and on the sale of turkeys remaining in growers' hands. Last year the number of turkeys raised was about 4 percent less than January 1 intentions because of an uncertain feed situation during the hatching season. In 1945 producers raised 14 percent more birds than they intended because of the increase in turkey prices during the hatching season and the shortage of red meats. In 1944 producers raised 8 percent more turkeys than they intended on January 1. In earlier years of record the intention indications exceeded actual numbers raised — in 1943 by 12 percent, in 1942 by 8 percent, in 1941 by less than 1 percent, in 1939 and 1940 by 2 percent, and in 1938 by 3 percent.

Reasons given by turkey growers on January 1 as to why they intend to decrease their 1947 turkey crop below that of 1946 all indicate that their 1946 net returns were cut severely by higher feed prices than in 1945 with little change in turkey prices. Feed prices averaged 20 percent higher in 1946. Growers generally expect high feed costs in 1947 and a decline in the demand for turkey meat with accompanying lower turkey prices. Other reasons mentioned were the high cost of labor, loss caused by predatory animals, and the unusual spread between hens and toms as influencing them to cut production in 1947.
